

## Software developer for permanent employment

We are looking for software developers to implement mathematically sophisticated algorithms for sensor fusion and automatic data analysis.

### What can you expect?

We offer you a varied collaboration on exciting software projects in an ambitious and rapidly growing company. Our customers come from a wide variety of areas in air traffic control, automation technology and medical technology.

Since we are a start-up, your tasks will be very diverse and cover a wide range. The task includes conception, implementation, testing and documentation of customer projects in technical areas.

### What do we expect?

- Successfully completed degree in computer science (University / FH) or a comparable educational certification
- Several years of experience in software development (e.g. Java, C / C ++, Matlab)
- In-depth knowledge of algorithms for sensor fusion (e.g. Kalman filters, UKF) and machine learning processes (e.g. neural networks)
- Structured and solution-oriented working style, strong analytical skills and teamwork
- Reliability and high quality awareness
- Very good verbal and written communication skills in German and English

### Our offer!

- Interesting and varied job
- Opportunity to actively participate in technically complex and exciting projects
- Support and encouragement from colleagues with high demands on the technical solution
- Attractive job in a growing company with very good transport links in Karlsruhe

### Application

We look forward to your application by email to: [career@knowtion.de](mailto:career@knowtion.de)
